

BigAmbition Nugget 28 game

Floor 2: Production – an example of ALL FLOORS 1-6 – result of clicking Proceed

Functionality:

While question is active, almost nothing else is, only the pertinent topic icon and name. PDA bottom menu is not visible while question is displayed.

PDA: User scrolls to view all four answer choices. Clicking an answer choice highlights it (as shown in image at right). An eye-catching 'Submit' button sits at the bottom. Users can click/highlight different answers until they click Submit.

Users can also click the topic icon at the top of the PDA or the name of the highlighted topic ('Organisational structure' in the example above)(no longer putting in the icons at the top of the PDA as there is not enough room) to view the text explaining that topic (see image at bottom right of Page-6). They then click the Back button marked '3' above to return to the question ('Back' is not highlighted or active as it is in the image above until the topic has been clicked). Only the topic pertinent to that question is clickable from the PDA at this stage.

Active items while question is activated: answer choices, highlighted topic icon, topic name, Submit, Close.

Active items when topic icon or name has been clicked: 'back', Close.

Notes

Submit is active only when an answer choice has been selected.

Design suggestion: PDA Close could be blue with a yellow highlighted state and a standard power symbol (vertical line in a circle).

3 This image shows the Back button as it would appear after the user has clicked the highlighted topic icon or title. When the question is displayed, this Back button will be not highlighted and inactive. The same is true of the Back button in the image below.

Action/result

1 User clicks answer choice.
